TYPES OF COATING

SOFTFLEX

1 component coating colored in to the core, application between 4 - 6 layers. This was our first coating, Mainly suitable for inside and private use.

FLEXPLUS

A very strong 3 layer 2 component coating suitable for heavy use and 100% waterproof. Suitable for in- and outdoor use.

HARDCOAT

This third coating is applied on EPS Styrofoam and is rock hard. It is comparable to polyester. With this coating we can make structural pieces and supply furniture for the highest traffic areas on the market, we even dare to call it bulletproof.
